

**UNIVERSITY OF MUMBAI**  
**No. UG//56 of 2016-17**

**CIRCULAR:-**

A reference is invited to the Syllabi relating to the B.Sc. degree course, vide this office Circular No. UG/98 of 2015-16, dated 13<sup>th</sup> October, 2016 and the Principals of affiliated Colleges in Science are hereby informed that the recommendation made by the Ad-hoc Board of Studies in Chemistry at its meeting held on 7<sup>th</sup> July, 2016 has been accepted by the Academic Council meeting held on 14<sup>th</sup> July, 2016 vide item No. 4.13 and that in accordance therewith, the revised syllabus as per the Choice Based Credit System for T.Y. B.Sc. programme in Chemistry (Sem. V & VI), which are available on the University's web site ([www.mu.ac.in](http://www.mu.ac.in)) and that the same has been brought into force with effect from the academic year 2016-17.

MUMBAI – 400 032  
/6 November, 2016

  
(Dr.M.A.Khan)  
REGISTRAR

To,

The Principals of the affiliated Colleges in Science.

**A.C/4.13/14.07.2016**

No. UG//56A of 2016

MUMBAI-400 032

/6 November, 2016

Copy forwarded with Compliments for information to:-

- 1) The Co-ordinator, Faculties of Science,
- 2) The Chairman, Board of Studies in Chemistry,
- 3) The Professor-cum-Director, Institute of Distance & Open Learning (IDOL)
- 4) The Director, Board of College and University Development,
- 5) The Co-Ordinator, University Computerization Centre,
- 6) The Controller of Examinations.

# **UNIVERSITY OF MUMBAI**

**Syllabus for sem V & VI**

**Program: B.Sc.**

**Course: CHEMISTRY**

(Credit Based Semester and Grading System with  
effect from the academic year 2016–2017)

**T.Y.B.Sc.**  
**CHEMISTRY**  
**Credit Based Semester and Grading System**  
**To be implemented from the Academic year 2016-2017**

**SEMESTER V**

**Theory**

Course	UNIT	TOPICS	Credits	L / Week
USCH501	I	<p><b>1.1 Colligative Properties of Dilute Solutions (8L)</b>  <b>1.1.1</b> Dilute solution, colligate properties, Raoult's law, relative lowering of vapour pressure.  <b>1.1.2</b> Elevation in boiling point of a solution, thermodynamic derivation relating elevation in the boiling point of a solution and the molar mass of the non-volatile solute.  <b>1.1.3</b> Depression in freezing point of a solution, thermodynamic derivation relating the depression in the freezing point of a solution and the molar mass of the non-volatile solute.  <b>1.1.4</b> Osmotic pressure, van't Hoff's equation for osmotic pressure, (derivation is expected) and determination of molar mass of the solute. Abnormal molar masses of solutes and van't Hoff factor (calculation of Degree of Association and Degree of Dissociation.)  <b>1.2 Phase Rule (7L)</b>  <b>1.2.1</b> Gibb's phase rule and terms involved in the equation.  <b>1.2.2</b> Application of phase rule to ONE component systems (i) water system, (ii) sulphur system  <b>1.2.3</b> Application of phase rule to TWO component systems, condensed systems, condensed phase rule, eutectic systems (Lead-Silver system), desilverisation of lead.  <b>1.2.4</b> Introduction to three component system, explanation of phase diagram for three liquids forming one immiscible pair.</p>	2.5	1

		<p><b>2.1 Surface Chemistry &amp; Catalysis (9L)</b></p> <p><b>2.1.1 Adsorption:</b> Physical and Chemical Adsorption, types of adsorption isotherms . Langmuir's adsorption isotherm (Postulates and derivation expected). B.E.T. equation for multilayer adsorption, (derivation not expected). significance of the terms involved in the equation is expected.),determination of surface area of an adsorbent using B.E.T. equation. Numericals on surface area determination are expected.</p> <p><b>2.1.2 Catalysis:</b> Homogeneous and heterogeneous catalysis, catalytic activity and selectivity, promoters, inhibitors, catalyst poisoning and deactivation,</p> <p><b>2.1.3 Acid-Base catalysis,</b> mechanism and kinetics of acid-base catalyzed reactions, effect of pH on acid-base catalyzed reactions. Mechanism and kinetics of enzyme catalyzed reaction (Michaelis-Menten equation).</p> <p><b>2.2 Colloids (6L)</b></p> <p><b>2.2.1</b> Introduction to colloidal state of matter.</p> <p><b>2.2.2</b> Origin of charge on colloidal particles. Concept of electrical double layer, zeta potential, Helmholtz and Stern model, Electro-kinetic phenomena: 1.Electrophoresis, 2.Electrophoresis , 3. Streaming potential 4. Sedimentation potential .</p> <p><b>2.2.3</b> Colloidal electrolytes.</p> <p><b>2.2.4</b> Donnan Membrane Equilibrium.</p> <p><b>2.2.5</b> Surfactants, micelle formation, applications of surfactants in detergents, food industry, in pesticide formulations.</p>		
	II			
	III	<p><b>3.1 Electrochemistry – Electrochemical cells (15L)</b></p> <p><b>3.1.1</b> Lewis concept of Activity and Activity coefficient, Mean ionic activity and mean ionic activity coefficient <math>\gamma_{\pm}</math> of an electrolyte, expression for activities of electrolytes of different valence type, ionic strength</p>		

		<p><b>3.1.2</b> Classification of cells: 1.chemical cells without transference 2.Concentration cells with and without transference (derivations of expression for concentration cell EMF are expected) Origin of liquid-liquid junction potential and its elimination using a salt bridge.</p> <p><b>3.1.3</b> Applications of EMF .measurements in the determination of <b>1.</b> pH of a solution using quinhydrone and glass electrode. <b>2</b> solubility and solubility product of sparingly soluble salts using chemical cell and concentration cell method <b>3.</b> determination of liquid-liquid junction potential .</p>		
	IV	<p><b>4.1 Introduction to Polymers (8L)</b> <b>4.1.1 Basic terms</b> : macromolecule, monomer, repeat unit, degree of polymerization. <b>4.1.2. Classification of polymers</b> based on (i) source, (ii) structure, (iii) thermal response, (iv) physical properties. <b>4.1.3. Molar masses of polymers:</b> 1. Number average molar mass, 2.Weight average molar mass, 3. Viscosity average molar mass, monodispersity, polydispersity. <b>4.1.4. Methods of determining molar masses of polymers</b> : 1. Ultracentrifuge method ( Limiting velocity method only). Viscosity method ( Mark-Houwink equation). <b>4.1.5. Introduction to light emitting polymers</b> ( characteristics, method of preparation and it's application are expected ). <b>4.2 Crystalline State (7L)</b> <b>4.2.1. Laws of Crystallography</b> <b>4.2.2.</b> Characteristics of simple cubic, face centered and body centered cubic system, inter planar distance in cubic lattices ( only expressions for ratios of inter planar distances are expected ). <b>4.2.3.</b> Use of X- rays in the study of crystal structure, Bragg's equation ( derivation expected), X- ray diffraction method of studying crystal lattices, structure of NaCl and KCl,</p>		1

		determination of Avagadro number. <b>4.2.4.</b> Elementary idea of defects in crystals- Frenkel defect and Schottky defect.		
<b>USCH502</b>	<b>I</b>	<b>1. Chemical Bonding And Solid State Chemistry (15L)</b> <b>1.1 Molecular Symmetry (7L)</b> <b>1.1.1</b> Introduction and Importance. <b>1.1.2</b> Symmetry elements and symmetry operations. <b>1.1.3</b> Concept of a Point Group with illustrations using the following point groups: (i) $C_{av}$ (HCl), (ii) $D_{ah}$ ( $H_2$ ), (iii) $C_{2v}$ ( $H_2O$ ), (iv) $C_{3v}$ ( $NH_3$ ), (v) $C_{2h}$ (trans – trichloroethylene), and (vi) $D_{3h}$ ( $BCl_3$ ). <b>1.2 Molecular Orbital Theory for Polyatomic Species (5L)</b> <b>1.2.1</b> Simple triatomic species: $H_3^+$ and $H_3$ (correlation between bond angle and Molecular orbitals). Term such as Walsh correlation diagram, Symmetry Adapted Linear Combinations (SALCs), Ligand Group orbitals (LGOs), transformation of atomic orbitals into appropriate symmetry types, expected to be discussed <b>1.3 (3L)</b> Other molecules (considering only $\sigma$ -bonding): i) $BeH_2$ , ii) $H_2O$ , Explanation of terms viz. crystal lattice, lattice points, unit cells and lattice constants.	<b>2.5</b>	<b>1</b>

	<b>II</b>	<p><b>2. Solid Materials (15L)</b>  <b>2.1 Structures of Solids (10L)</b>  <b>2.1.1</b> Importance of solid state chemistry.  <b>2.1.2</b> Classification of solids on the basis of bonding.  <b>2.1.3</b> Closest packing of rigid spheres (hcp, ccp), packing density in simple cubic, bcc, fcc and hcp lattices (numerical problems expected).  Point defects with respect to Frenkel and Schottky defects expected.  <b>2.1.4</b> Structure metallic solids.  <b>2.1.5</b> Tetrahedral and octahedral interstitial voids in ccp lattice, tetrahedral holes, limiting radius ratios  for different coordination numbers and their significance, calculation of limiting radius ratio for coordination number 4.  <b>2.1.7</b> Structures of sodium chloride and cesium chloride.  <b>2.2 Superconductivity (05L)</b>  <b>2.2.1</b> Superconductivity, Meissner effect.  <b>2.2.2</b> Different superconducting materials viz, conventional superconductors, organic superconductors, alkali metal fullerenes (A<sub>3</sub>C<sub>60</sub>) and high temperature Superconductors.  <b>2.2.3</b> Applications of superconducting materials.</p>		<b>1</b>
	<b>III</b>	<p><b>3. Chemistry of elements (15L)</b>  <b>3.1 Inner transition elements (3L)</b>  <b>3.1.1</b> Introduction: position of f-block elements and comparison between lanthanides and actinides  <b>3.1.2</b> The shapes of f-orbitals.  <b>3.1 Lanthanides Series (10L)</b>  <b>3.2.1</b> Chemistry of lanthanides with reference to (i) lanthanide contraction, (ii) Oxidation states (iii) magnetic and spectral properties,  <b>3.2.2</b> Occurrence, extraction and separation of lanthanides by Solvent extraction.  <b>3.2.3</b> Applications of lanthanides.</p>		<b>1</b>

		<b>3.3 Actinides Series (2L)</b> <b>3.3.1 Chemistry</b> of Uranium and with reference to occurrence, extraction (solvent extraction method), <b>3.3.2 Properties and applications.</b>		
	IV	<b>4. Solution Chemistry</b> <b>4.1 Acid-base Chemistry in Aqueous Medium (8L)</b> <b>4.1.1 Acidity</b> of mono- and polyatomic cations. <b>4.1.2 Basicity</b> of mono- and polyatomic anions (discussion for 4.1.1 as well as 4.1.2 to Include Latimer equation and predominance diagrams). <b>4.2 Chemistry in Non-aqueous Solvents (7L)</b> <b>4.2.1</b> Classification of solvents and importance of non-aqueous solvents. <b>4.2.2</b> Characteristics and study of liquid ammonia, dinitrogen tetroxide and acetic acid as non-aqueous solvents with respect to (i) acid-base reactions and (ii) redox reactions.		
USCH503	I	<b>1.1. Mechanism of Organic Reactions (15L)</b> 1.1.1 Thermodynamic and Kinetic control of organic reactions: Concept with mechanisms of the following reactions: addition of HX to butadiene; sulfonation of naphthalene. Nucleophilicity/ electrophilicity vs Basicity/acidity. 1.1.2 Mechanism of elimination reactions, with stereochemistry: E1 and E2 reactions: regioselectivity (Saytzeff and Hofmann rules). 1.1.3 Mechanism of reactions of carbonyl compounds with nucleophiles: 1.1.3.1 Formation of acetals/ketals from aldehydes and ketones. 1.1.3.2 Reaction of aldehydes and ketones with primary and secondary amines. 1.1.3.3 Acyl nucleophilic substitution (tetrahedral mechanism): Acid catalysed esterification of Carboxylic acids and base promoted hydrolysis of esters. 1.1.4 Mechanism of rearrangements with examples and stereochemistry wherever applicable. 1.1.4.1 Migration to electron deficient carbon: Pinacol,	2.5	1

		<p>Benzylic acid. 1.1.4.2 Migration to electron deficient nitrogen: Beckmann, Hofmann.</p> <p>1.1.5 Mechanism of the following reactions with synthetic application: Claisen condensation, Michael addition.</p>		
	II	<p><b>2. Stereochemistry (15L)</b></p> <p>2.1.1 Molecular chirality and element of symmetry: Mirror Plane symmetry (inversion centre), rotation-reflection (alternating) axis, Chirality of compounds without stereogenic centre: cummulenes, spirans and biphenyls.</p> <p>2.1.2 Stability of cycloalkanes: Strains in cycloalkanes-angle, eclipsing, transannular (3 to 8 membered). Conformations of cyclohexane, mono- and di- alkyl cyclohexanes and their relative stabilities.</p> <p>2.1.3 Stereo selectivity and Stereo specificity: Idea of enantioselectivity (ee) and diastereoselectivity (de). Topicity-enantiotopic and diastereotopic atoms, groups and faces.</p> <p><b>Stereochemistry of-</b></p> <p>(1) Substitution reactions- <math>S_N1</math>, <math>S_N2</math>, <math>S_Ni</math> (reaction of alcohol with thionyl chloride). (2) <math>E2</math>-anti-elimination-Base induced dehydrohalogenation of 1-bromo-1,2- diphenylpropane. (3) Addition reactions to olefins-i) catalytic hydrogenation ii) bromination (electrophilic anti addition) (iii)syn-hydroxylation (molecular addition) with <math>OsO_4</math> and <math>KMnO_4</math>.</p>		1
	III	<p><b>3.1 Carbohydrates (10L)</b></p> <p>3.1.1 Introduction: Classification, Sources, Reducing and non-reducing sugars DL notation.</p> <p>3.1.2 Structures of monosaccharides: Fischer projection (4-6 carbon monosaccharides and Haworth formula-Furanose and pyranose forms of pentoses and hexoses. Interconversion :open and Haworth forms of monosaccharides with 5 and 6 carbons. Chair conformation with stereochemistry of D-glucose and D-fructose. Stability of chair forms of D-</p>		1

		<p>glucose.</p> <p>3.1.3 Determination of open chain configuration- of D-glucose assuming the configuration of D-arabinose; and of D-fructose assuming the configuration of D-glucose.</p> <p>3.1.4 Anomers and epimers of monosaccharides. Enantiomers and diastereomers of glucose. Mutarotation (with mechanism) in D-glucose.</p> <p>3.1.5 Chain lengthening and shortening reaction: Modified kiliani-fischer synthesis. Wohl method.</p> <p>3.1.6 Reactions of D-glucose and D-fructose: (a) osazone formation (b) reduction- <math>H_2/Ni</math>, <math>NaBH_4</math> c)oxidation- bromine water, <math>HNO_3</math>, <math>HIO_4</math>. D) interconversion of D-glucose and D-fructose e) acetylation f) methylation [e and f with cyclic pyranose form].</p> <p>3.1.7 Commercial importance of carbohydrates in pharmaceutical, paper,food and Textile industries.</p> <p><b>3.2. IUPAC Nomenclature (5L)</b> IUPAC systematic and accepted trivial nomenclature of the following classes of compounds, including substituted ones (up to 2 substituents/ functional groups):</p> <p><b>3.2.1</b> (a)Bicyclic compounds- spiro-,fused, and bridged (upto 11 carbon atoms)-saturated and unsaturated compounds.</p> <p><b>3.2.2</b> (b) Biphenyls.</p> <p><b>3.2.3</b> (c) Cummulenes upto 3 double bonds (d) Monocyclic (5 and 6 membered) aromatic and non-aromatic heterocyclic compounds containing a maximum of two hetero atoms among N,O,S.</p> <p><b>3.1.1</b>Introduction:Classification, Sources, Reducing and non-reducing sugars DL notation.</p> <p><b>3.1.2</b> Structures of monosaccharides: Fischer projection (4- 6 carbon monosaccharides and Haworth formula-Furanose and pyranose forms of pentoses and hexoses. Interconversion :open and Haworth forms of monosaccharides with 5 and 6 carbons. Chair conformation with</p>

		<p>stereochemistry of D-glucose and D-fructose. Stability of chair forms of D-glucose.</p> <p><b>3.1.3</b> Determination of open chain configuration- of D-glucose assuming the configuration of D-arabinose; and of D-fructose assuming the configuration of D-glucose.</p> <p><b>3.1.4</b> Anomers and epimers of monosaccharides. Enantiomers and diastereomers glucose. Mutarotation (with mechanism) in D-glucose.</p> <p><b>3.1.5</b> Chain lengthening and shortening reaction: Modified kiliani-fischer synthesis. Wohl method.</p> <p><b>3.1.6</b> Reactions of D-glucose and D-fructose: (a) osazone formation (b) reduction- <math>H_2/Ni</math>, <math>NaBH_4</math> c) oxidation- bromine water, <math>HNO_3</math>, <math>HIO_4</math>. D) interconversion of D-glucose and D-fructose e) acetylation f) methylation [e and f with cyclic pyranose form].</p> <p><b>3.2. IUPAC Nomenclature (5L)</b> IUPAC systematic and accepted trivial nomenclature of the following classes of compounds, including substituted ones (up to 2 substituents/functional groups):</p> <p><b>3.2.1</b> (a) Bicyclic compounds- spiro-, fused, and bridged (upto 11 carbon atoms)-saturated and unsaturated compounds.</p> <p><b>3.2.2</b> (b) Biphenyls.</p> <p><b>3.2.3</b> (c) Cummulenes upto 3 double bonds (d) Monocyclic (5 and 6 membered) aromatic and non-aromatic heterocyclic compounds containing a maximum of two hetero atoms among N,O,S.</p>		
	IV	<p><b>4.1. Heterocyclic Chemistry (8L)</b></p> <p><b>4.1.1</b> Introduction: Electronic structure and aromaticity of furan, pyrrole, thiophene and pyridine.</p> <p><b>4.1.2</b> Synthesis: Synthesis of furans, pyrroles, and thiophenes by Paal-Knor synthesis. Pyridines by Hantzsch synthesis and from 1,5-diketones.</p> <p><b>4.1.3</b> Reactivity: Reactivity towards electrophilic substitution reactions- of furan, pyrrole and thiophene on basis</p>		1

		<p>of stability of intermediate; and of pyridine on the basis of electron distribution. Nucleophilic substitution reaction of pyridine on the basis of electron distribution.</p> <p><b>4.1.4 Reactions of heterocycles:</b> The following reactions of furan, pyrrole and thiophene: Halogenation, Nitration, Sulphonation, Vilsmeier formylation reaction, Friedel-Crafts reaction. Furan: Diels-Alder reaction. Ring opening of furan. Pyrrole: Acidity and basicity of pyrrole -Comparison of basicity of pyrrole and pyrrolidine, Acid catalyzed polymerization of pyrrole. Pyridine: Basicity. Comparison of basicity of pyridine, pyrrole and piperidine. Sulphonation of pyridine, with and without catalyst. Reduction. Oxidation of alkyl pyridines and action of sodamide (Chichibabin reaction). N-methylation of pyridine. Quaternization of piperidine, pyrrolidine and Hofmann elimination of the quaternary salts.</p> <p><b>4.2. Organic Synthesis (7L)</b></p> <p><b>4.2.1 Introduction:</b> Criteria for ideal organic synthesis. Yield and selectivity. Multi-component synthesis – with examples, Mannich reaction, Hantzsch synthesis of pyridines (without mechanism).</p> <p><b>4.2.2 Illustrative synthesis of industrially important compounds:</b> Ibuprofen (chiral synthesis), paracetamol (green synthesis), L-ascorbic acid (from D-glucose), norfloxacin, thyroxine, vanillin, methyl dihydrojasmonate (Hedione), Bifenox-I, pigment red 242, indigo, 2-hydroxy-3-amino-5-nitrobenzene sulphonic acid.</p> <p><b>4.2.3 Newer methods of organic synthesis:</b> Introduction to the use of the following in organic synthesis: Ultrasound, microwaves, PTC.</p> <p><b>4.1.1 Introduction:</b> aromaticity of furan, pyrrole, thiophene and pyridine.</p> <p><b>4.1.2 Synthesis:</b> Synthesis of furans, pyrroles, and thiophenes by Paal-Knorr synthesis. Pyridines by Hantzsch</p>		
--	--	---	--	--

		<p>synthesis and from 1,5-diketones. <b>4.1.3</b></p> <p>Reactivity: Reactivity towards electrophilic substitution reactions- of furan, pyrrole and thiophene on basis of stability of intermediate; and of pyridine on the basis of electron distribution. Nucleophilic substitution reaction of pyridine on the basis of electron distribution.</p> <p><b>4.1.4</b> Reactions of heterocycles: The following reactions of furan, pyrrole and thiophene: Vilsmeier formylation reaction, Friedel-Crafts reaction.</p> <p>Furan: Diels-Alder reaction. Ring opening of furan. Pyrrole: Acidity and basicity of pyrrole-Comparison of basicity of pyrrole and pyrrolidine, Acid catalyzed polymerization of pyrrole. Pyridine: Basicity.</p> <p>Comparison of basicity of pyridine, pyrrole and piperidine. Sulphonation of pyridine, with and without catalyst. Reduction. Oxidation of alkyl pyridines and action of sodamide (Chichibabin reaction). N-methylation of pyridine. Quaternization of piperidine, pyrrolidine and Hofmann elimination of the quaternary salts.</p> <p><b>4.2. Organic Synthesis (7L)</b></p> <p><b>4.2.1</b> Introduction: Criteria for ideal organic synthesis. Yield and selectivity. Multi- component synthesis – with examples, Mannich reaction, Hantzsch synthesis of pyridines (without mechanism).</p> <p><b>4.2.2</b> Illustrative synthesis of industrially important compounds: Ibuprofen (chiral synthesis), paracetamol (green synthesis), L- ascorbic acid (from D-glucose), norfloxacin, nalidixic acid, vanillin, methyl dihydrojasmonate (Hedione), Bifenox-I, pigment red 242, 2-hydroxy-3-amino-5-nitrobenzene sulphonic acid.</p> <p><b>4.2.3</b> Newer methods of organic synthesis: Introduction to the use of the following in organic synthesis: Ultrasound, microwaves, PTC.</p>		
--	--	---	--	--

USCH504	I	<p><b>1. Treatment of analytical data-I and sampling (15 L)</b></p> <p><b>1.1 Treatment of Analytical Data (7L)</b></p> <p>Types of errors, determinate and indeterminate errors, minimization of errors, constant and proportionate errors, accuracy and precision, measures of dispersion and central tendency: mean, median, average deviation, relative average deviation, standard deviation, variance, coefficient of variation.[Numerical problems expected]</p> <p><b>1.2 Sampling (8L)</b></p> <p>Terms involved, importance of sampling, sampling techniques, sampling of gases, ambient and stack sampling, equipment used, sampling of homogeneous and heterogeneous liquids, sampling of static and flowing liquids, methods and equipments used, sampling of solids, importance of particle size and sample size, samples used, need for the reduction in the sample size, methods of reduction in sample size, collection, preservation and dissolution of the sample.</p>	2.5	1
	II	<p><b>2. Titrimetric analysis-I and UV-Visible spectroscopy. (15L)</b></p> <p><b>2.1 Acid-base Titrations (5L)</b></p> <p>Construction of titration curves and choice of indicators in the titration of [1] strong acid and strong base, [2] strong acid and weak base, [3] weak acid and strong base, [4] weak acid and weak base.</p> <p><b>2.2 Precipitation titrations (4L)</b></p> <p>Argentometric titrations, construction of the titration curve, Volhard's method, Mohr's method, adsorption indicators, theory and applications.</p> <p><b>2.3 U.V. Visible Spectroscopy (4L)</b></p> <p>Photometers and spectrophotometers, Instrumentation in the case of single and double beam spectrophotometers, Qualitative and quantitative analysis, calibration curve method.</p>		1

	III	<b>3. Methods of separation-I (15L)</b> <b>3.1 Solvent Extraction (8L)</b> Partition coefficient and distribution ratio, extraction efficiency, separation factor, role of complexing agents in solvent extraction, chelation, ion pair formation, solvation, types of solvent extraction: batch, continuous. [Numerical problems expected] <b>3.2 Chromatography (2L)</b> Introduction to chromatographic techniques, classification of chromatographic techniques. <b>3.3 Planar Chromatography (5L)</b> Principle, techniques and applications of [1] Paper chromatography [2] Thin layer chromatography		1
	IV	<b>4. Optical methods (15L)</b> <b>4.1 Atomic Spectroscopy (7L)</b> Absorption and emission spectra, energy level diagrams, process involved in atomization, flame photometry, flame atomizer, types of burners, monochromators and detectors, atomic absorption spectroscopy; flame and electrothermal atomizer, sources, instrumentation, quantitative applications of atomic absorption and flame photometry, calibration curve method, standard addition and internal standard method. <b>4.2 Molecular Fluorescence and Phosphorescence Spectroscopy (4L)</b> Theory, instrumentation and applications <b>4.3 Turbidimetry and Nephelometry (4L)</b> Scattering of light, effect of concentration, particle size and wavelength on light scattering, instrumentation and applications.		1

## Practicals

<b>USCHP05</b>	<p style="text-align: center;"><b>Practicals of Course USCH501</b></p> <p><b><u>Physical Practicals</u></b></p> <p><b>Chemical Kinetics –</b> To determine the order between <math>K_2S_2O_8</math> &amp; KI by fractional change method.</p> <p><b>Viscosity –</b> To determine the molecular weight of high polymer polyvinyl alcohol (PVA) by viscosity measurement.</p> <p style="text-align: center;"><b>OR</b></p> <p>To determine the radius of a glycerol molecule by viscosity measurement.</p> <p><b>Potentiometry –</b></p> <ol style="list-style-type: none"> <li>To determine the amount of Fe(II) in the given solution by titration with a standard <math>K_2Cr_2O_7</math> solution and hence to find the formal redox potential of <math>Fe^{3+}/Fe^{2+}</math></li> <li>To determine the solubility product and solubility of AgCl potentiometrically using chemical cell.</li> </ol> <p style="text-align: center;"><b>OR</b></p> <ol style="list-style-type: none"> <li>To determine the solubility product and solubility of AgCl potentiometrically using concentration cell.</li> </ol> <p><b>Colorimetry –</b> To determine the amount of Fe(III) present in the given solution by using salicylic acid by colorimetric titration.(static method) (<math>\lambda = 525\text{ nm}</math>)</p> <p><b>pH –Metry –</b> To determine acidic and basic dissociation constants of amino acid hence to calculate isoelectric point.</p> <p><b>Course USCH502</b></p> <p><b><u>Inorganic Practicals</u></b></p> <p><b>Inorganic preparations</b></p> <ol style="list-style-type: none"> <li>Potassium diaquo bis-(oxalate)cuprate (II)<math>K_2[Cu(C_2O_4)_2 \cdot (H_2O)]</math></li> </ol>	<b>3</b>	<b>8</b>

	<p>2. <math>\text{CuCl}_2 \cdot 2\text{DMSO}</math></p> <p>3. Bis(ethylene diamine)iron(II)sulphate <math>[\text{C}_2\text{H}_4(\text{NH}_2)_2\text{FeSO}_4 \cdot 4\text{H}_2\text{O}]</math>.</p> <p>4. Skill based Qualitative preparation of Chromium (II)acetate <math>\text{Cr}(\text{OAc})_2</math> so that the following outcomes are achieved:</p> <ul style="list-style-type: none"> <li>• Setting up reactor for Cr(II) ions</li> <li>• Identification of oxidation states of Chromium</li> <li>• Preparation of chromium(II)acetate</li> <li>• Isolation of the product</li> </ul>		
--	---	--	--

	<b>Volumetric analysis</b> <ol style="list-style-type: none"> <li>1. Determination of magnesium from the supplied commercial sample of Milk of magnesia tablet</li> <li>2. Estimation of Nickel(II) complexometrically using murexide indicator (Students are expected to standardize supplied EDTA solution using <math>\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}</math>)</li> </ol>		
<b>USCHP06</b>	<p style="text-align: center;"><b>Practicals of Course USCH503</b></p> <p><b><u>Organic Practicals</u></b></p> <ol style="list-style-type: none"> <li>i. Separation of binary (solid-solid) mixture. (Weights and physical constant of both crude components of the mixture are to be reported. (Minimum 4 mixtures)</li> <li>ii. Identification of an organic compound of known chemical type. (Minimum 4 mixtures)</li> </ol> <p style="text-align: center;">Syllabus for Organic Chemistry Sem-VI</p> <p><b><u>Organic preparations</u></b></p> <ol style="list-style-type: none"> <li>i. Acetylation of hydroquinone.</li> <li>ii. Nitration of nitrobenzene.</li> <li>iii. Hydrolysis of ethyl benzoate.</li> <li>iv. Bromination of acetanilide.</li> </ol> <p><b><u>Course USCH504</u></b></p> <p><b><u>Analytical Practicals</u></b></p> <ol style="list-style-type: none"> <li>1. Estimation of persulphate in the given sample by the method of back titration.</li> <li>2. Determination of the calcium and the magnesium content of a dolomite sample.</li> <li>3. Determination of glucose content of a honey sample by Winstater's method.</li> <li>4. Determination of the amount of fluoride in the given solution colorimetrically.</li> <li>5. Determination of Vitamin C content of a given tablet by titration with sodium hydroxide pH metrically</li> </ol>	<b>3</b>	<b>8</b>

Theory**

Course	UNIT		Credits	L / Week
USCH601	I	<p><b>1.1 Molecular Spectroscopy –I (15L)</b>  <b>1.1.1</b> Dipole moment: Dipole moment, polarization of a bond, bond moment, dipole moment and molecular structure.  <b>1.1.2 Rotational Spectrum:</b> Rotational spectrum of a diatomic molecule, rigid rotor, moment of inertia, energy levels, conditions for obtaining pure rotational spectrum, selection rule, nature of spectrum, determination of inter nuclear distance and isotopic shift.  <b>1.1.3 Vibration ( IR ) spectrum:</b> Vibrational motion, degrees of freedom, modes of vibration, vibrational spectrum of a diatomic molecule, simple harmonic oscillator, energy levels, zero point energy, conditions for obtaining vibrational spectrum, selection rule, nature of spectrum.  <b>1.1.4 Vibration-Rotation spectrum of diatomic molecule</b> vibrating rotor, energy levels, selection rule, nature of spectrum, R and P branches, anharmonic oscillator : energy levels, selection rule, fundamental band, overtones . Application of vibration-rotation spectrum in determining Force constant, determination and significance. Introduction to infrared spectra of simple molecules like H<sub>2</sub>O and CO<sub>2</sub>  <b>1.1.5 Raman Spectroscopy :</b> Scattering of electromagnetic radiation, Rayleigh scattering, Raman scattering, nature of Raman spectrum , Stoke's lines, anti-Stoke's lines, Raman shift, quantum theory of Raman spectrum, comparative study of IR and Raman spectra, rule of mutual exclusion.(example of CO<sub>2</sub>molecule).</p>	2.5	1
	II	<p><b>2.1 Basics of Quantum Chemistry (10L)</b>  <b>2.1.1</b> Classical mechanics, limitations of classical mechanics, Black body radiation, photoelectric effect, Compton effect.  <b>2.1.2</b> Introduction to quantum mechanics,</p>		1

		<p>Planck's theory of quantization, wave particle duality, de-Broglie equation, Heisenberg's uncertainty principle.</p> <p><b>2.1.3</b> Progressive and standing waves, boundary conditions, Schrodinger's time independent wave equation(derivation not expected)., interpretation and properties of wave function.</p> <p><b>2.1.4</b> Postulates of quantum mechanics ( following are to be considered),1. state function and it's significance2. Concept of operators : definition, addition, subtraction and multiplication of operators, commutative and non- commutative operators, linear operator, Hamiltonian operator, 3. Eigen function and eigen value, eigen value equation.</p> <p><b>2.2 Applied Electrochemistry (5L)</b></p> <p><b>2.2.1</b> Polarization, concentration polarization and it's elimination</p> <p><b>2.2.2</b> Decomposition potential, experimental determination of decomposition potential, factors affecting decomposition potential (nature of electrolyte, nature of electrodes and temperature) Tafel's equation for hydrogen overvoltage, Overvoltage, experimental determination of over-voltage,</p> <p><b>2.2.3</b></p> <p>Electroplating ---objectives and procedures</p>		
	III	<p><b>3.1 Renewable Energy Sources (5L)</b></p> <p><b>3.1.1.</b> Lithium ion cell.</p> <p><b>3.1.2.</b> Fuel cells; Choice of fuel and oxidant, Bacon's H<sub>2</sub> and O<sub>2</sub> fuel cell.</p> <p><b>3.1.3.</b> Solar cells, solar energy, photovoltaic effect, semiconductors as solar energy converters, silicon solar cell</p> <p><b>3.1.4.</b> Hydrogen : Fuel of the future, production of hydrogen by direct electrolysis of water, advantages of hydrogen as a universal energy medium.</p> <p><b>3.2 Nuclear Magnetic Resonance Spectroscopy (6L)</b></p> <p><b>3.2.1.</b> Nuclear spin, magnetic moment, nuclear 'g' factor, energy levels, Larmor precession, Relaxation processes in n.m.r. ( spin-spin relaxation and spin-lattice relaxation).</p> <p><b>3.2.2.</b> NMR Spectrometer, chemical shift, shielding and deshielding of protons, low resolution n.m.r. spectrum of methanol and ethanol.</p>		1

		<b>3.3 Chemical Kinetics (4 L)</b> <b>3.3.1</b> Collision theory of reaction rates, application of collision theory to 1. uni-molecular reaction and 2. bimolecular reaction (Lindemann theory, derivation expected). Merits and drawbacks of collision theory. <b>3.3.2</b> Classification of reactions as slow, fast and ultra-fast. study of kinetics of fast reactions by Stop flow method.		
	IV	<b>4.1 Nuclear Chemistry</b> <b>4.1.1</b> Types of nuclear radiations and their characteristics, behaviour of ion pairs in electric field, detection and measurement of nuclear radiations using G. M. Counter and Scintillation Counter. <b>4.1.2</b> Kinetics of radioactive decay, units of radioactivity (Curie, Becquerel, Rutherford) <b>4.1.3</b> Radioactive equilibrium (secular and transient), determination of radioactive constants for radio-elements having 1. moderate half life, 2. long half life 3. extremely long or short half life. <b>4.1.4</b> Use of radioisotopes as tracers in 1. chemical investigations- reaction mechanism, 2. age determination- dating by carbon-14 <b>4.1.5</b> Nuclear reactions – nuclear transmutation, artificial radioactivity Q-value of nuclear reaction, threshold energy. <b>4.1.6</b> Fissile and fertile material, nuclear fission, chain reaction, factor controlling fission process. (multiplication factor and critical size or mass of fissionable material), nuclear power reactor and breeder reactor.		1
USCH602	I	<b>Coordination Chemistry (15L)</b> <b>1.1 Crystal Field Theory (CFT)</b> <b>1.1.1</b> Basic tenets of Crystal field theory and effect of crystal field on central metal valence orbitals. <b>1.1.2</b> Splitting of $d$ orbitals in octahedral, tetrahedral and square planar complexes. <b>1.1.3</b> Crystal field splitting energy ( $10Dq$ ) for octahedral complexes and factors affecting the magnitude of $10Dq$ . <b>1.1.4</b> Crystal field stabilization energy (CFSE), calculation of CFSE, for octahedral and tetrahedral complexes with	2.5	1

		<p><math>d^1</math> to <math>d^{10}</math> metal ion configurations.</p> <p><b>1.1.5</b> Effect of crystal field splitting on i) Ionic radius and ii) Lattice energy.</p> <p><b>1.1.6</b> Theoretical failure of the CFT model.</p> <p><b>1.1.7</b> Experimental evidence for co- valence in co-ordination compounds.(i) ESR spectrum of <math>[\text{IrCl}_6]^{2-}</math> (ii) NMR spectrum of tris (acetyl acetanato) vanadium complex, (iii) Intensities of <math>d-d</math> transitions, and (iv) Nephelauxetic effect. Consequences of crystal field splitting on various properties such as ionic radii, hydration energy, lattice energy, enthalpies of formation, colour and magnetic properties.</p> <p><b>1.2 Molecular Orbital Theory (MOT) of Coordination Complexes</b></p> <p><b>1.2.1</b> Application to octahedral complexes in case of (i) <math>[\text{Ti}(\text{H}_2\text{O})]^{3+}</math>, (ii) Fluoro complexes of Fe(II) and Fe (III) and (iii) Cyano complexes of Fe(II) and Fe (III).</p> <p><b>1.2.2</b> Effect of pi-bonding an ligand field splitting parameter in <math>\text{M} \rightarrow \text{L}</math> and <math>\text{L} \rightarrow \text{M}</math> interactions.</p> <p><b>1.3 Electronic States and Terms for Polyelectronic Atoms</b></p> <p><b>1.3.1</b> Introduction: electronic configuration and electronic states, Term symbols, coupling of spin momenta (<math>M_s</math>),orbital momenta (<math>M_l</math>)and spin- orbit coupling or Russell-Saunders coupling.</p> <p><b>1.3.2</b> Determination of Terms for <math>p^2</math> electronic configuration (as in a carbon atom).</p> <p><b>1.3.3</b> Terms and micro-states for transition metal atoms/ions.</p>		
	II	<p><b>2. Properties of Coordination compounds (15L)</b></p> <p><b>2.1 Stability of Complexes (5L)</b></p> <p><b>2.1.1</b> Thermodynamic stability and kinetic stability of complexes with examples.</p> <p><b>2.1.2</b> Stability constants: Stepwise and overall constants and their inter- relationship.</p> <p><b>2.1.3</b> Factors affecting thermodynamic stability.</p> <p><b>2.1.4</b> Potentiometric method of determination of stability constants with example of silver-ammonia complex.</p> <p><b>2.2 Substitution Reactions in Octahedral Complexes (5L)</b></p>		1

**2.2.1** Introduction, types of reactions in complexes.

**2.2.2** Ligand substitution reactions: basic mechanisms.

**2.2.3** Inert and labile complexes and

---

		<p>electronic configurations and lability of complexes.</p> <p><b>2.2.4</b> Acid hydrolysis, base hydrolysis and anation reactions.</p> <p><b>2.3 Electronic Spectra (5L)</b></p> <p><b>2.3.1</b> Types of electronic transitions like intra –ligand transitions, charge transfer transitions and intra-metal transitions and (<i>d-d</i> or ligand field transitions for transition metals).</p> <p><b>2.3.2</b> Rules for electronic transitions: Spin and Orbital or Laporte selection rules.</p> <p>Orgel Diagrams for D Terms (i.e., <math>d^1</math>, <math>d^4</math> and <math>d^6</math>, <math>d^9</math> electronic configurations) and its use in interpretation of visible electronic absorption spectra of these configurations.</p>		
	III	<p><b>Organometallic Chemistry (15L)</b></p> <p><b>3.1 Organometallic Compounds of main group metals (6L)</b></p> <p><b>3.1.1</b> Introduction: General synthetic methods: (i) Oxidative addition, (ii) Metal-Metal exchange (Transmetallation), (iii) Carbanion-Halide exchange, (iv) Metal Hydrogen exchange and (v) Methylene insertion reactions.</p> <p><b>3.1.2</b> Chemical reactions: (i) Reactions with oxygen, (ii) Alkylation and arylation reactions (iii) Reactions with protic reagents and (iv) Complex formation reactions.</p> <p><b>3.2 Organometallic compounds of transition metals (9L)</b></p> <p><b>3.2.1</b> Synthesis, structure, reactions and of ferrocene.</p> <p><b>3.2.2</b> Bonding in ferrocene on the basis of VBT.</p> <p><b>3.2.3</b> Bonding in Re and Mo halide complexes.</p> <p><b>Some Selected Topics (15L)</b></p> <p><b>4.1 Inorganic Polymers (3L)</b></p> <p>4.1.1 Various methods of classification with examples.</p> <p><b>4.1.2</b> Chemistry of borazine with reference to preparation, properties, structures, bonding and applications.</p> <p><b>4.2 Characteristics and Treatment</b></p>		1
	IV			
				1

		<p><b>of Liquid Effluent (06L)</b></p> <p><b>4.2.2</b> Characterization of waste: biochemical oxygen demand (BOD), chemical oxygen demand (COD), total organic carbon (TOC), aerobic and anaerobic processes.</p> <p><b>4.2.3</b> Removing of solid contaminants, physical and chemical principles such as coagulation, flocculation and sedimentation.</p> <p><b>4.2.4</b> Primary, secondary and tertiary of liquid effluents.</p> <p><b>4.3 Nanomaterials(04L)</b></p> <p><b>4.3.2</b> Introduction and importance of nanomaterials.</p> <p><b>4.3.3</b> Properties (Comparison between bulk and nanomaterials): (i) Optical properties, (ii) Electrical conductivity, and (iii) Mechanical properties.</p> <p><b>4.3.4</b> Forms of nanomaterials: nanofilms, nanolayers, nanotubes, nanowires, and nanoparticles.</p> <p><b>4.3.5</b> Chemical methods of preparation: (i) Colloidal route, and (ii) Sol-gel method.</p> <p><b>4.5 Inorganic Pharmaceuticals (2L)</b></p> <p><b>4.4.2</b> Gastrointestinal agents viz., (i) antacids (aluminium hydroxide, milk of magnesia, sodium bicarbonate and (ii) cathartics (magnesium sulphate and sodium phosphate).</p> <p>Topical agents viz., (i) protectives and adsorbents (talc, calamine), (ii) antimicrobial agents (potassium permanganate, tincture iodine, boric acid ) and astringents (alum).</p>		
<b>USCH603</b>	<b>I</b>	<p><b>1.1 Spectroscopy (15L)</b></p> <p>1.1.1 Introduction : Electromagnetic spectrum, units of wavelength and frequency.</p> <p>1.1.2 UV- Visible Spectroscopy: Basic theory, solvents, nature of UV-VIS spectrum, concept of Chromophore, auxochrome, bathochromic shift, Hypsochromic shift hyperchromic</p>	<b>2.5</b>	<b>1</b>

		<p>effect and chromophore-auxochrome interactions.</p> <p>1.1.3 IR Spectroscopy: Basic theory, nature of IR spectrum, selection rule , fingerprint region.</p> <p>1.1.4 PMR Spectroscopy: Basic theory of NMR, nature of PMR spectrum, chemical shift (<math>\delta</math> unit), standard for PMR, solvents used. Factors affecting chemical shift: (1) inductive effect (2) anisotropic effect (with reference to C=C, C<math>\equiv</math>C, C=O and benzene ring). Spin- spin coupling and coupling constant. Proton exchange-application of deuterium exchange ,Application of PMR in structure determination.</p> <p>1.1.5 Spectral characteristics of following classes of organic compounds, including benzene and monosubstituted benzenes, with respect to UV-VIS, IR,PMR: (1)alkanes (2)alkenes and polyenes (3) alkynes (4) haloalkanes (5) alcohols (6) carbonyl compounds (7) ethers (8) carboxylic acids (9) esters (10)amines (11) amides (broad regions characteristic of different groups are expected).</p> <p>1.1.6 Mass Spectrometry: Basic theory.Nature of mass spectrum. General rules of fragmentation. Importance of - molecular ion peak, isotopic peaks, basepeak, Nitrogen rule.Illustrative fragmentation of alkanes and aliphatic carbonyl compounds (No McLafferty rearrangement).</p> <p>1.1.7 Problems of structure elucidation of simple organic compounds using individual or combined use of the above spectroscopic technique are expected.(index of hydrogen deficiency should be the first step in solving the problems).</p>		
	<b>II</b>	<p><b>2.1 Polymers (11L)</b></p> <p>2.1.1 Introduction: General idea of monomers, polymers, and polymerization, natural and synthetic polymers. Homopolymers and copolymers. Classification of polymers- Plastic, fibres, resins, elastomers. Thermoplastics and thermosets. Copolymers-alternating, block, random, graft.</p> <p>2.1.2 Mechanism of free radical addition</p>		<b>1</b>

		<p>polymerization.</p> <p>2.1.3 Elastomers: Natural and synthetic rubbers. Diene polymerization: 1,2- and 1,4- addition (cis and trans) polymerization of isoprene. 1,3-Butadiene-styrene copolymer.</p> <p>2.1.4 Stereochemistry of polymers: Tacticity. Role of Ziegler-Natta catalyst (co- ordination polymerization) in directing the tacticity in polypropylene (no mechanism).</p> <p>2.1.5 Preparation &amp; use of polymers:          (1) Addition polymers: (a) polyethylene (b) polypropylene (c) PVC (d) polystyrene (e) polyacrylonitrile (f) polyvinylalcohol (g) Teflon.          (2) Condensation Polymers: (a) Polyesters (b) polyamides (c) polyurethans (d) phenol-formaldehyde resin (e) epoxy resin (f) polycarbonates.</p> <p>2.1.6 Recyclable polymers. Biodegradable polymers and their uses. Biomedical use of polymers.</p> <p>2.1.7 Additives to polymers: Plasticizers ,stabilizers and fillers.(The students are expected to identify monomers in a given polymer and draw the structure of a polymer from a given set of monomers).</p> <p><b>2.2 Photochemistry</b></p> <p>2.2.1 Introduction: Difference between thermal and photochemical reactions. Jablonski diagram, singlet and triple states, allowed and forbidden transitions, fate of excited molecules, photosensitization. 2.2.2 Photochemical reactions of olefins: photoisomerisation, photochemical rearrangement of 1,4-dienes (di <math>\pi</math> methane)</p> <p>2.2.3 Photochemistry of carbonyl compounds: Norrish I, Norrish II cleavages, Photo reduction (e.g. benzophenone to benzpinacol).</p>		
	<p><b>III</b></p> <p>3.1</p>	<p><b>3.1 Catalysts and Reagents (5L)</b>          Study of the following catalysts and reagents with respect to functional group transformations and selectivity (no mechanism).</p> <p>3.1.1 <b>Catalysts</b> : Catalysts for <sup>1</sup> hydrogenation:          Raney Ni,Pt and PtO<sub>2</sub>: C=C, CN, NO<sub>2</sub>, aromatic ring; Pd/C: C=C, COCl→CHO (Rosenmund); Lindlar catalyst: alkynes; Wilkinson's catalyst for</p>		

		<p>stereo selective reduction of olefins.</p> <p>3.1.2 <b>Reagents:</b> (1) LiAlH<sub>4</sub> and Red-Al: reduction of CO, COOR, CN, NO<sub>2</sub>. (2) NaBH<sub>4</sub>: reduction of CO (3) SeO<sub>2</sub>: hydroxylation of allylic and benzylic positions, oxidation of CH<sub>2</sub>, alpha to CO to CO. (5) mCPBA and R-OOH/H<sub>2</sub>O<sub>2</sub> for epoxidation of C=C. (6) NBS: allylic and benzylic bromination of position alpha to CO.</p> <p><b>3.2 Natural Products (10L)</b></p> <p>3.2.1 Introduction: Primary and secondary metabolites. Introduction to the following natural products with respect to the sources and classes. (Structures of the compounds specified below are expected).</p> <p>(a) Terpene: Isoprene and special isoprene rule. <math>\alpha</math>-terpeniol, citral, camphor, <math>\alpha</math>-pinene.</p> <p>(b) Alkaloids: nicotine, atropine.</p> <p>(c) Vitamins: Vitamins A and C.</p> <p>(d) Hormones: adrenaline, thyroxine.</p> <p>(e) Steroids: cholesterol, progesterone.</p> <p>3.2.2 Structure determination of natural products: 3.2.2.1 Ozonolysis in terpenoids- Examples of open chain and monocyclic monoterpenes. 3.2.2.2 Hofmann exhaustive methylation and degradation in alkaloids – simple open chain and monocyclic amines. 3.2.2.3 Structure determination of citral and nicotine through degradation studies. Total synthesis of degradation studies. Total synthesis of (i) Citral from 3-methylbutan-1-ol (ii) Nicotine from nicotinic acid.</p> <p>3.2.4 Commercial importance of terpenoids and alkaloids: Synthesis of camphor from <math>\alpha</math>-pinene, <math>\alpha</math> and <math>\beta</math> ionones, geraniol and nerol from citral.</p> <p>3.2.5</p>		
	IV	<p><b>4.1 Organometallic Chemistry (5L)</b></p> <p>4.1.1 Introduction: Carbon-metal bond- Nature, types reactivity.</p> <p>4.1.2 <b>Organo magnesium Compounds:</b> Grignard reagent :Preparation, structure, and stability, Reaction with compounds containing acidic hydrogen, carbonyl compounds, cyanides and CO<sub>2</sub>.</p> <p>4.1.3 <b>Organolithium Compounds :</b> Preparation using alkyl/aryl halides. Reactions with compounds containing</p>		1

		<p>acidic hydrogen, alkyl halides, carbonyl compounds, cyanides and CO<sub>2</sub>. Lithium dialkyl cuprates: Preparation and reactions with aliphatic /aromatic/vinylic halides.</p> <p>4.1.4 <b>Organozinc compounds:</b> Preparation of dialkyl zinc. Reaction with water, acid chlorides and alkyl halides. Reformatsky reaction (with mechanism).</p> <p><b>4.2 Chemistry of some Important Biomolecules: (10L)</b></p> <p>4.2.1 <math>\alpha</math>-Amino acids: Structure, configuration, Essential amino acids and their abbreviations, classification, Properties: pH dependency of ionic structure and isoelectric point. Methods of preparations: Strecker synthesis, amidomalonate synthesis, Erlenmeyer azalactone synthesis.</p> <p>4.2.2 Polypeptides and Proteins: Polypeptides: Peptide bond. Nomenclature and representation of polypeptides. Merrifield's solid phase peptide synthesis (example of di- and tri- peptides for nomenclature and synthesis). Proteins: Sources, types, functions, colloidal nature, separation based on isoelectric point, denaturation and functions. Partial and total hydrolysis. General idea of primary, secondary, tertiary and quaternary structures.</p> <p>4.2.3 Nucleic acids: Selective hydrolysis of nucleic acids. Sugars and bases in nucleic acids. Structures of nucleosides and nucleotides in DNA and RNA. Structure of nucleic acids (DNA and RNA): Base pairing in nucleic acids. Importance of nucleic acids-self duplication, protein synthesis.</p>		
<b>USCH604</b>	<b>I</b>	<p><b>Electroanalytical methods. (15L)</b></p> <p><b>1.1 D.C. Polarography (11L):</b> Polarizable and nonpolarizable electrodes, basic principles, residual current, diffusion current, limiting current, dropping mercury electrode, supporting electrolyte half wave potential, derivation of the polarographic wave equation for a reversible reaction. Ilkovic equation, oxygen interference and its removal, maxima and minima suppressors, polarographic cell, qualitative</p>	<b>2.5</b>	<b>1</b>

		and quantitative analysis, calibration curve and standard addition method, applications. [Numerical problems expected] <b>1.2 Amperometric Titrations:</b> Basic principles, rotating platinum electrode and nature of the titration curves, applications, advantages and limitations.		
	<b>II</b>	<b>Methods of separation-II (15L)</b> <b>2.1</b> Gas chromatography (6L): Gas liquid chromatography, basic principles retention time, retention volume, resolution, peak width theoretical plates. HETP, instrumentation, columns, detectors, applications. <b>2.2</b> High Performance Liquid Chromatography (4L): Instrumentation, types of elution, U.V. and I.R. detector and applications <b>2.3</b> Ion Exchange Chromatography (5L): Types of ion exchangers, mechanism of ion exchange, selectivity coefficients and separation factors, capacity and its determination, factors affecting the separation of ions, applications.		<b>1</b>
	<b>III</b>	<b>Treatment of analytical data-II and Titrimetric analysis-II (15L)</b> <b>3.1</b> Treatment of Analytical Data (6L): Distribution of random errors, Gaussian curve, students' t, confidence limits and confidence interval, criteria for rejection of result: 2.5d rule, 4.0 rule and Q test, F test, testing for significance, null hypothesis, method of averages, least squares method. Numerical problems expected] <b>3.2</b> Complexometric Titrations (5L): General introduction, EDTA titrations, advantages and limitations of EDTA as the titrant, absolute and conditional formation constants of metal EDTA complexes, construction of titration curves, types of EDTA titrations, methods of increasing the selectivity of EDTA as a titrant, metallochromic indicators, theory and applications. <b>3.3</b> Redox Titrations (4L): General introduction, theory of redox indicators, criterion for choosing an indicator for a redox titration, construction of the titration curves in the case of (1) Fe (II) Vs. Ce(IV )		<b>1</b>

		(2) Fe (II) Vs. dichromate, use of diphenyl amine and ferroin as redox indicators.		
	IV	<b>Concepts in Quality and miscellaneous methods (15L)</b> <b>4.1</b> Total quality management (5L) : concept of quality, quality control, quality assurance total quality management, ISO series, Good laboratory practices <b>4.2</b> Mass Spectrometry (2L): Basic principles, introduction of components only <b>4.3</b> Thermal Methods (5L): Classification of thermal methods, thermogravimetric analysis, basic principles, instrumentation factors affecting the TG curve, applications <b>4.4</b> Introduction to Radio Analytical Techniques (3L): Classification of the techniques, introduction to neutron activation analysis and its applications.		1

### Practicals

	<b>Practicals of Course USCH601</b> <b>Physical Practicals</b> <b>Chemical Kinetics –</b> To determine the energy of activation for the acid catalysed hydrolysis of methyl acetate. <b>Partition coefficient</b> To determine the equilibrium constant for the reaction $KI + I_2 \rightleftharpoons KI_3$ by partition method. (Partition coefficient of $I_2$ between $CCl_4$ and water is to be given)		
USCHP07	<b>Potentiometry –</b> 1. To determine the strength of the given strong acid (HCl) by potentiometric titration using quinhydrone electrode (Calculation of pH from $E_{cell}$ and the plot of (a) $\frac{dE}{dV}$ against V (b) pH against V graphs are expected). <b>OR</b> To determine $pK_a$ value of the given weak monobasic acid ( $CH_3COOH$ ) by e.m.f. measurements. 2. To determine $E_{cal}$ at room temperature	3	8

	<p>and using this value, determine standard reduction potential of <math>\text{Ag}/\text{Ag}^+</math> electrode at room temperature.</p> <p><b>Conductometry –</b> To determine the amount of dibasic acid (Oxalic acid) by conductometric titration against strong base.</p> <p style="text-align: center;"><b>OR</b></p> <p>To determine the relative strength of monochloroacetic acid and acetic acid conductometrically.</p> <p><b>Course USCH602</b> <b><u>Inorganic Practicals</u></b> <b>Inorganic preparations</b></p> <ol style="list-style-type: none"> <li>1. Mercury tetrathiocyanato Cobaltate (II) <math>\text{Hg}[\text{Co}(\text{SCN})_4]</math></li> <li>2. Magnesium oxinate <math>[\text{Mg}(\text{Ox})_2]</math></li> <li>3. Tris-acetyl acetonato iron(III) <math>[\text{Fe}(\text{AcAc})_3]</math></li> <li>4. Tetrammine copper(II) sulphate. <math>[\text{Cu}(\text{NH}_3)_4]\text{SO}_4 \cdot \text{H}_2\text{O}</math></li> </ol> <p><b>Inorganic estimations/ Analysis</b></p> <ol style="list-style-type: none"> <li>1. Estimation of copper iodometrically using sodium thiosulphate. ( Students are expected to standardize supplied sodium thiosulphate solution using potassium dichromate)</li> <li>2. Estimation of lead by complexometry using EDTA solution. ( Students are expected to standardize the supplied EDTA solution. Suggested standard for standardization: <math>\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}</math>)</li> </ol>		
<b>USCHP08</b>	<p style="text-align: center;"><b>Practicals of Course USCH603</b></p> <p><b><u>Organic Practicals</u></b> <b>Binary Mixture Separation</b> Separation of mixture containing (VL + NVL) &amp; (S + VL) components.</p> <p><b>Organic Preparations</b></p> <ol style="list-style-type: none"> <li>1. Aniline/p-toluidine <math>\rightarrow</math> N-Acetyl derivative</li> <li>2. Salicylic acid/nitrobenzene/ Acetanilide <math>\rightarrow</math> Nitro derivative</li> </ol>	<b>3</b>	<b>8</b>

	<ol style="list-style-type: none"> <li>3. <math>\beta</math>- naphthol <math>\rightarrow</math> Methyl Ether derivative (Using dimethyl sulphate)</li> <li>4. Acetanilide <math>\rightarrow</math> p-bromoacetanilide derivative</li> <li>5. Aniline/ p-toluidine <math>\rightarrow</math> Schiff base with benzaldehyde</li> <li>6. Hydroquinone/beta naphthol <math>\rightarrow</math> Acetyl derivative</li> <li>7. Methyl salicylate/ethyl benzoate <math>\rightarrow</math> Acid derivative (Hydrolysis)</li> <li>8. Benzaldehyde/p-nitrobenzaldehyde <math>\rightarrow</math> Acid (Oxidation)</li> </ol> <p><b>Course USCH604</b></p> <p><b><u>Analytical Practicals</u></b></p> <ol style="list-style-type: none"> <li>1. Determination of chemical oxygen demand of a water sample.</li> <li>2. Determination of percentage purity of a sample of common salt using a cation exchanger.</li> <li>3. Determination of potassium content of a commercial salt sample by flame photometry.</li> <li>4. Determination of acetic acid content of a vinegar sample by potentiometric titration with sodium hydroxide using quinhydrone.</li> <li>5. Determination of Cr (VI) in the given solution as dichromate by the method of least squares, spectrophotometrically</li> </ol>

**UNIVERSITY OF MUMBAI**

No. UG/73 of 2018-19

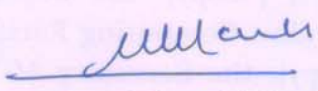

**CIRCULAR:-**

Attention of the Principals of the affiliated Colleges and Directors of the recognized Institutions in Science & Technology Faculty is invited to this office Circular Nos. UG/156 of 2016-17, dated 16<sup>th</sup> November, 2016 relating to syllabus of the Bachelor of Science (B.Sc.) degree course.

They are hereby informed that the recommendations made by the Board of Studies in Chemistry at its meeting held on 28<sup>th</sup> May, 2018 have been accepted by the Academic Council at its meeting held on 14<sup>th</sup> June, 2018 vide item No. 4.41 and that in accordance therewith, the revised syllabus as per the (CBCS) for the Chemistry of T.Y.B.Sc. Physical Chemistry, Inorganic Chemistry, Organic Chemistry and Analytical Chemistry (Sem - V & VI) (3 and 6 Units) including Applied Component Drugs and Dyes, Heavy Fine Chemicals and Petrochemicals has been brought into force with effect from the academic year 2018-19, accordingly. (The same is available on the University's website [www.mu.ac.in](http://www.mu.ac.in)).

MUMBAI - 400 032

To 6<sup>th</sup> June, 2018  
6<sup>th</sup> July

**T Y B Sc Chemistry****Applied Component****SEMESTER V****(Drugs and Dyes)****COURSE CODE: USACDD501****CREDITS: 02****LECTURES: 60**

Unit			Topics	
<b>I</b>	<b>1.1</b>		<b>General Introduction to Drugs</b>	<b>(8L)</b>
		1.1.1	Definition of a drug, sources of drugs, requirements of an ideal drug, classification of drugs (based on therapeutic action),	
		1.1.2	Nomenclature of drugs: Generic name, Brand name, Systematic name	
		1.1.3	Definition of the following medicinal terms: Pharmacokinetics, Pharmacodynamics, Pharmacophore, Prodrug, Half – life efficiency, LD <sub>50</sub> , ED <sub>50</sub> , GI <sub>50</sub> Therapeutic Index.	
		1.1.4	Brief idea of the following terms: Receptors, Agonists, Antagonists, Drug-receptor interaction, Drug Potency, Bioavailability, Drug toxicity, Drug addiction, Spurious Drugs, Misbranded Drugs, Adulterated Drugs, Pharmacopoeia.	
	<b>1.2</b>		<b>Routes of Drug Administration and Dosage Forms</b>	<b>(3L)</b>
		1.2.1	Oral and Parenteral routes with advantages and disadvantages.	
		1.2.2	Formulations & combination formulation, Different dosage forms (including Patches & Adhesives, emphasis on sustained release formulations and enteric coated tablets).	
	<b>1.3</b>		<b>Pharmacodynamic agents:</b> A brief introduction of the following pharmacodynamic agents and the study with respect to their chemical structure, chemical class, therapeutic uses, and side effects.	
		<b>1.3.1</b>	<b>CNS Drugs:</b> Classification based on pharmacological actions: CNS Depressants & CNS Stimulants. Concept of sedation and hypnosis, anaesthesia. <ul style="list-style-type: none"> <li>• Phenytoin (Hydantoin)</li> <li>• Trimethadione (Oxazolinediones) (<b>Synthesis from acetone</b>)</li> <li>• Alprazolam (Benzodiazepines)</li> <li>• Levetiracetam (Pyrrolidines)</li> <li>• Amphetamine (Phenethylamine) (<b>Asymmetric synthesis from phenyl acetic acid</b>)</li> <li>• Chlorpromazine (Phenothiazines)</li> </ul>	<b>(4L)</b>

**UNIT-II (Drugs)**

<b>2</b>	<b>2.1</b>		<b>Analgesics, Antipyretics and Anti-inflammatory Drugs.</b>	<b>(4L)</b>
		2.1.1	<b>Analgesics and Antipyretics</b>	

			<ul style="list-style-type: none"> <li>• Morphine (Phenanthrene alkaloids)</li> <li>• Tramadol (Cyclohexanols) (<b>Synthesis from salicylic acid</b>)</li> <li>• Aspirin (Salicylates)</li> <li>• Paracetamol (p-Amino phenols)</li> </ul>	
--	--	--	--	--

		2.1.2	<b>Anti-inflammatory Drugs</b> Mechanism of inflammation and various inflammatory conditions. <ul style="list-style-type: none"> <li>• Steroids: Prednisolone, Betamethasone</li> <li>• Sodium Diclofenac, Aceclofenac (N- Aryl anthranilic acids) (<b>Synthesis from 2,6-dichlorodiphenyl amine</b>)</li> </ul>	
	<b>2.2</b>		<b>Antihistaminic Drugs</b>	<b>(2L)</b>
			<ul style="list-style-type: none"> <li>•—Diphenhydramine (Ethanol amines)</li> <li>•—Cetirizene (Piperazine) (<b>Synthesis from 4-Chlorobenzhydryl chloride</b>)</li> <li>• Chlorpheniramine maleate (Ethyl amines)</li> <li>• Pantoprazole (Benzimidazoles)</li> </ul>	
	<b>2.3</b>		<b>Cardiovascular drugs</b>	<b>(3L)</b>
			Classification based on pharmacological action <ul style="list-style-type: none"> <li>•—Isosorbide dinitrate (Nitrates)</li> <li>•—Valsartan (Amino acids) (structure not expected)</li> <li>• Atenolol (Aryloxy propanol amines) (<b>Synthesis from 3-Hydroxy phenyl acetamide</b>)</li> <li>• Amlodipine (Pyridines)</li> <li>• Frusemide /Furosemide (Sulfamoyl benzoic acid)</li> <li>• Rosuvastatin (Pyrimidine)</li> </ul>	
	<b>2.4</b>		<b>Antidiabetic Agents</b>	<b>(2L)</b>
			General idea and types of diabetes; Insulin therapy <ul style="list-style-type: none"> <li>• Glibenclamide (Sulphonyl ureas)</li> <li>• Metformin (Biguanides)</li> <li>• Dapagliflozin (Pyranose)</li> <li>• Pioglitazone (Thiazolidinediones) (<b>Synthesis from 2-(5-ethylpyridin-2-yl) ethanol</b>)</li> </ul>	
	<b>2.5</b>		<b>Antiparkinsonism Drugs</b>	<b>(2L)</b>
			Idea of Parkinson's disease. <ul style="list-style-type: none"> <li>• Procyclidine hydrochloride (Pyrrolidines)</li> <li>• Ethopropazine hydrochloride (Phenothiazines)</li> <li>• Levodopa (Amino acids) (<b>Synthesis from Vanillin</b>)</li> </ul>	
	<b>2.6</b>		<b>Drugs for Respiratory System</b>	<b>(2L)</b>
			General idea of: Expectorants; Mucolytes; Bronchodilators; Decongestants; Antitussives	<b>)</b>

			<ul style="list-style-type: none"> <li>• Ambroxol (Cyclohexanol) (<b>Synthesis from paracetamol</b>)</li> <li>•—Salbutamol (Phenyl ethyl amines)</li> <li>• Oxymetazoline (Imidazolines)</li> <li>• Codeine Phosphate (Opiates)</li> </ul>	
--	--	--	--	--

### Unit III (Dyes)

<b>3</b>	<b>3.1</b>		Introduction to the dye-stuff Industry	<b>(5L)</b>
		3.1.1	Dyes	
			<p>Definition of dyes, requirements of a good dye i.e. Colour, Chromophore and Auxochrome, Solubility, Linearity, Coplanarity, Fastness, Substantivity, Economic viability.</p> <p>Definition of fastness and its properties and Mordants with examples</p> <p>Explanation of nomenclature or abbreviations of commercial dyes with at least one example suffixes – G, O, R, B, K, L, C, S H, 6B, GK, 6GK,</p> <p>Naming of dyes by colour index (two examples) used in dye industries.</p>	
		3.1.2	Natural and Synthetic Dyes	
			<p>Natural Dyes: Definition and limitations of natural dyes. Examples and uses of natural dyes w.r.t Heena, Turmeric, Saffron, Indigo, Madder, Chlorophyll –<b>names</b> of the chief dyeing material/s in each natural dye <b>[structures not expected]</b>,</p> <p>Synthetic dyes: Definition of synthetic dyes, primaries and intermediates. Important milestones in the development of synthetic dyes – Emphasis on Name of the Scientist, dyes and the year of the discovery is required. (structure is not expected)</p>	
	<b>3.2</b>		Substrates for Dyes : Types of fibres	<b>(3L)</b>
		3.2.1	Natural: cellulosic and proteinaceous fibres, examples – wool, silk and cotton structures and names of dyes applied on each of them.	
		3.2.2	Semi – synthetic: definition and examples [structures not expected]	
		3.2.3	Synthetic: Nylon, Polyesters and Polyamides structures and names of dyes applied on each of them	
		3.2.4	Blended fabrics: definition and examples [structures not expected]	
		3.2.5	Binding forces of dyes on substrate: ionic forces, covalent linkages, hydrogen bonding, vander-walls forces	
	<b>3.3</b>		Classification of dyes based on applications and dyeing methods	<b>(7L)</b>
		3.3.1	Dyeing methods	
			<p>Basic Operations involved in dyeing process:</p> <p>i. Preparation of fibres                      ii. Preparation of dyebath</p> <p>iii. Application of dyes                      iv. Finishing</p>	
			<p>Dyeing Method of Cotton Fibres:</p> <p>(i) Direct dyeing                      (ii) Vat dyeing</p> <p>(iii) Mordant dyeing                      (iv) Disperse dyeing</p>	

		3.3.2	Classification of dyes based on applicability on substrates (examples with structures) (a) Acid Dyes- Orange II, (b) Basic Dyes-methyl violet, (c) Direct cotton Dyes- Benzofast Yellow 5GL (d) Azoic Dyes – Diazo components; Fast yellow G, Fast orange R. Coupling components. Naphthol AS, Naphthol ASG (e) Mordant Dyes-Eriochrome Black A, Alizarin. (f) Vat Dyes- Indanthrene brown RRD, (g) Sulphur Dyes- Sulphur Black T (no structure) (h) Disperse Dyes-Celliton Fast brown 3R, (i) Reactive Dyes- Cibacron Brilliant Red B,	
		3.3.3	Optical Brighteners: General idea, important characteristics of optical brighteners and their classes [Stilbene, Coumarin, Heterocyclic vinylene derivatives, Diaryl pyrazolines, Naphthylamide derivatives] general structure of each class.	

#### Unit – IV (Dyes)

<b>4</b>	<b>4.1</b>		<b>Colour and Chemical Constitution of Dyes</b>	<b>(4L)</b>
		4.1.1	Absorption of visible light, Colour of wavelength absorbed, Complementary colour.	
		4.1.2	Relation between colour and chemical constitution.	
			(i) Armstrong theory (quinonoid theory) and its limitations. (ii) Witt's Theory: Chromophore, Auxochrome, Bathochromic & Hypsochromic Shift, Hypochromic & Hyperchromic effect (iii) Valence Bond theory, comparative study and relation of colour in the following classes of compounds/dyes: Benzene, Nitrobenzene, Nitroanilines, Nitrophenols, Benzoquinones, Azo, Triphenyl methane, Anthraquinones. (iv) Molecular Orbital Theory.	
	<b>4.2</b>		<b>Unit process and Dye Intermediates</b>	
		4.2.1	<b>A brief idea of Unit Processes</b>	<b>(3L)</b>
			Introduction to primaries and intermediates	
			Unit processes: definition and brief ideas of below unit processes: (a) Nitration (b) Sulphonation (c) Halogenation (d) Diazotization: (3 different methods & its importance) (e) Ammonolysis (f) Oxidation NB: Definition, Reagents, Examples of each unit processes mentioned above with reaction conditions (mechanism is not expected)	

		4.2.2	<b>Preparation of the Following Intermediates</b>	<b>(8L)</b>
			<u>Benzene derivatives</u> : Benzenesulphonic acid; 1,3-Benzenedisulphonic acid; sulphanilic acid; o-, m-, p-chloronitrobenzenes; o-, m-, p-nitroanilines; o-, m-, p-phenylene diamines; Naphthol ASG	
			<u>Naphthalene Derivative</u> : Schaeffer acid; Tobias acid; Naphthionic acid; N.W. acid; cleve-6-acid; H-acid; Naphthol AS	
			<u>Anthracene Derivative</u> : 1-Nitroanthraquinone; 1-Aminoanthraquinone Anthraquinone-2-sulphonic acid; Benzanthrone.	

### References (For Units III & IV):

2. The Chemistry of Synthetic Dyes and Pigments, Lubs H.A., Robert E Krieger Publishing Company, NY ,1995
3. Chemistry of Dyes and Principles of Dyeing, Shenai V.A., Sevak Publications, 1973

### I] Practicals

#### SEMESTER V

#### (Drugs and Dyes)

**COURSE CODE: USACDD5P1**

**CREDITS: 02**

1. Estimation of Ibuprofen (back titration method)
2. Estimation of Acid neutralizing capacity of a drug
3. Preparation of Aspirin from salicylic acid.
4. Separation of components of natural pigments by paper chromatography (eg: chlorophyll)

### II] Project:

**Preparation of Orange II dye (semi-microscale 1.0gms) and its use for dyeing different fabrics**

## SEMESTER VI

### (Drugs and Dyes)

**COURSE CODE: USACDD601**

**CREDITS: 02**

**LECTURES: 60**

### UNIT – I (Drugs)

<b>1</b>	<b>1.1</b>		<b>Drug Discovery, Design and Development</b>	<b>(6L)</b>
		1.1.1	Discovery of a Lead compound: Screening, drug metabolism studies and clinical observation, Lipinski's rule of 5	
		1.1.2	Medicinal properties of compounds from Natural Sources: Anti-infective and anticancer properties of Turmeric (Curcumin)	
		1.1.3	Development of drug: The Pharmacophore identification, modification of structure or functional group, Structure activity relationship (Sulphonamides).	
		1.1.4	Structure modification to increase potency: Homologation, Chain branching and Extension of the structure.	
		1.1.5	Computer assisted drug design.	
	<b>1.2</b>		<b>Drug Metabolism:</b> Introduction, Absorption, Distribution, Bio-transformation, Excretion Different types of chemical transformation of drugs with specific examples.	<b>(3L)</b>
	<b>1.3</b>		<b>Chemotherapeutic Agents:</b> Study of the following chemotherapeutic agents with respect to their chemical structure, chemical class, therapeutic uses, side effects and introduction to MDR wherever applicable.	
		1.3.1	<b>Antibiotics and antivirals:</b> Definition, <ul style="list-style-type: none"> <li>• Amoxicillin (<math>\beta</math>-lactum antibiotics)</li> <li>• Cefpodoxime (Cephalosporins)</li> <li>• Doxycycline (Tetracyclines)</li> <li>• Levofloxacin (Quinolones) (<b>Synthesis from 2,3,4 – Trifluoro -1-nitrobenzene</b>)</li> <li>• Aciclovir/Acyclovir (Purines)</li> </ul>	<b>(2L)</b>
		5.3.2	<b>Antimalarials:</b> Types of malaria; Symptoms; Pathological detection during window period (Life cycle of the parasites not to be discussed) <ul style="list-style-type: none"> <li>• Chloroquine (3-Amino quinolones)</li> <li>• Artemether (Benzodioxepins)</li> </ul> <b>Following combination to be discussed:</b> Artemether-Lumefantrine (no structure)	<b>(2L)</b>

	1.3.3	<b>Anthelmintics and AntiFungal agents</b> Drugs effective in the treatment of Nematodes and Cestodes infestations. <ul style="list-style-type: none"> <li>• Diethyl carbamazine (Piperazines)</li> <li>• Albendazole (Benzimidazoles) (<b>Synthesis from 2-Nitroaniline</b>)</li> <li>• Clotrimazole (Imidazole)</li> <li>• Fluconazole (Triazole) (<b>Synthesis from 1- Bromo – 2,4-difluorobenzene</b>)</li> </ul>	(2L)
--	-------	--	------

**UNIT – II(Drugs)**  
**Chemotherapeutic Agents continued.**

2	2.1	<b>Antiamoebic Drugs</b> Types of Amoebiasis <ul style="list-style-type: none"> <li>• Metronidazole, Ornidazole, Tinidazole (Imidazole)</li> </ul> Synthesis of Metronidazole from glyoxal by Debus-Radziszewski imidazole synthesis route  <b>Following combination therapy to be discussed:</b> Ciprofloxacin-Tinidazole	(1L)
	2.2	<b>Antitubercular and Antileprotic Drugs</b> Types of Tuberculosis; Symptoms and diagnosis of Tuberculosis. Types of Leprosy. General idea of Antibiotics used in their treatment. <ul style="list-style-type: none"> <li>• PAS (Amino salicylates)</li> <li>• Isoniazide (Hydrazides)</li> <li>• Pyrazinamide (Pyrazines)</li> <li>• (+) Ethambutol (Aliphatic diamines) (<b>Synthesis from 1- Nitropropane</b>)</li> <li>• Dapsone(Sulphonamides) (<b>Synthesis from 4- Chloronitrobenzene</b>)</li> <li>• Clofazimine (Phenazines)</li> <li>• Bedaquiline (Quinoline)</li> </ul> <b>Following combination therapy to be discussed:</b> (i) Rifampin + Ethambutol + Pyrazinamide (ii) Rifampin + Isoniazide + Pyrazinamide	(3L)
	2.3	<b>Anti-Neoplastic Drugs</b> Idea of malignancy; Causes of cancer Brief idea of Immuno Stimulants &Immuno depressants <ul style="list-style-type: none"> <li>• Lomoustine (Nitrosoureas)</li> <li>• Anastrozole(Triazoles) (<b>Synthesis from 3,5-bis (bromo methyl) toluene</b>)</li> <li>• Cisplatin (Chloro Platinum)</li> <li>• Vincristine, Vinblastine, Vindesine) (Vinca alkaloids) (structure not expected)</li> </ul>	(2L)
	2.4	<b>Anti-HIV Drugs</b> Idea of HIV pathogenicity, Symptoms of AIDS <ul style="list-style-type: none"> <li>• AZT/Zidovudine, Lamivudine,DDI (Purines)</li> </ul>	(1L)
	2.5	<b>Drug Intermediates:</b> Synthesis and uses 1. 2,3,6-Triamino-6- hydroxypyrimidine from Guanidine	(2L)

		2. p-[2'-(5-Chloro-2-methoxy benzamido) ethyl]-benzenesulphonamide from Methyl-5-chloro-2-methoxybenzene 3. 3-(p-Chlorophenyl)-3-hydroxypiperidine from 3-Chloroacetophenone 4. p-Acetyl amino benzenesulphonyl chloride from Aniline 5. Epichlorohydrine from propene	
	<b>2.6</b>	<b>Nano particles in Medicinal Chemistry</b> Introduction; Carbon nano particles (structures) and Carbon nano tubes: <ul style="list-style-type: none"> <li>• Functionalization for Pharmaceutical applications</li> <li>• Targeted drug delivery</li> <li>• In vaccine (Foot and mouth disease)</li> <li>• Use in Bio-physical treatment.</li> </ul> Gold nano particles in treatment of: Cancer; Parkinsonism; Alzheimer. Silver nano particles: Antimicrobial activity.	<b>(4L)</b>
	<b>2.7</b>	<b>Drugs and Environmental Aspects</b> <ul style="list-style-type: none"> <li>• Impact of Pharma-industry on environment,</li> <li>• International regulation for human experimentation with reference to: "The Nuremberg Code" and "The Helsinki Declaration".</li> </ul>	<b>(2L)</b>

### Reference Books (For Units I & II):

## SEMESTER VI

### Unit – III (Dyes)

3	3.1		<b>Classification of Dyes based on Chemical Constitution and Synthesis of Selected Dyes</b> (Synthesis of the dyes marked with * is expected)	(12L)
			<b>i) Nitro Dye:</b> Naphthol Yellow S	
			<b>ii) Nitroso Dye:</b> Gambine Y	
			<b>iii) Azo dyes:</b> a) Monoazo dyes: Orange IV *(from sulphanilic acid) & Eriochrome Black T* (from $\beta$ -naphthol) b) Bisazo dyes: Congo Red* (from nitrobenzene) c) Trisazo Dye: Direct Deep Black EW* (from benzidine)	
			<b>iv) Diphenylmethane dye:</b> Auramine O* (from N,N-dimethyl aniline)	
			<b>v) Triphenylmethane dye:</b> a) Diamine series: Malachite Green* (from benzaldehyde) b) Triamine series: Acid Magenta c) Phenol series: Rosolic acid	
			<b>vi) Heterocyclic Dyes:</b> a) Thiazine dyes: Methylene Blue b) Azine dyes: Safranin T* (from o-toluidine) c) Xanthene Dyes: Eosin* (from phthalic anhydride) d) Oxazine Dyes: Capri Blue e) Acridine Dyes: Acriflavine	
			<b>vii) Quinone Dyes:</b> a) Naphthaquinone: Naphthazarin b) Anthraquinone Dyes: Indanthrene Blue* (from anthraquinone)	
			<b>viii) Indigoid Dyes:</b> Indigo* (from aniline + monochloroacetic acid)	
			<b>ix) Phthalocyanine Dyes:</b> Monastral Fast Blue B	
	3.2		<b>Health and Environmental Hazards of Synthetic Dyes and their Remediation Processes</b>	(3L)
		3.2.1	<b>Impact of the textile and leather dye Industry on the environment</b> with special emphasis on water pollution	
		3.2.2	<b>Health Hazards:</b> Toxicity of dyes w.r.t food colours.	
		3.2.3	<b>Effluent Treatment Strategies:</b> Brief introduction to effluent treatment plants (ETP) Primary Remediation processes: (Physical Processes) Sedimentation, Aeration, Sorption (activated charcoal, fly ash etc.)  Secondary Remediation processes: Biological Remediation – Biosorption, bioremediation and biodegradation  Chemical Remediation: Oxidation Processes (chlorination), Coagulation-flocculation-Precipitation	

### Unit – IV (Dyes)

<b>4</b>	<b>4.1</b>		<b>Non-textile uses of dyes:</b>	<b>(8L)</b>
		4.1.1	<b>Biomedical uses of dyes</b> i) Dyes used in formulations (Tablets, capsules, syrups etc) Indigo carmine, Sunset yellow, Tartrazine ii) Biological staining agents Methylene blue, Crystal violet and Safranin T iii) DNA markers Bromophenol blue, Orange G, Cresol red iv) Dyes as therapeutics Mercurochrome, Acriflavine, Crystal Violet, Prontosil	
		4.1.2	<b>Dyes used in food and cosmetics:</b> i) Properties of dyes used in food and cosmetics ii) Introduction to FDA and FSSAI iii) Commonly used food colours and their limits	
		4.1.3	<b>Paper and leather dyes</b> i) Structural features of paper and leather ii) Dyes applicable to paper and leather	
		4.1.4	<b>Miscellaneous dyes</b> i) Hair dyes ii) Laser dyes iii) Indicators iv) Security inks iv) Coloured smokes and camouflage colours	
	<b>4.2</b>		<b>Pigments</b>	<b>(3L)</b>
			Definition of pigments, examples, properties of pigments, difference between dyes and pigments. Definition of Lakes and Toners	
	<b>4.3</b>		<b>Dyestuff Industry - Indian Perspective</b>	<b>(4L)</b>
		4.3.1	Growth and development of the Indian Dyestuff Industry	
		4.3.2	Strengths, Weaknesses, Opportunities and Challenges of the Dyestuff industry in India	
		4.3.3	Make in India - Future Prospects of the Dye Industry
